SUN AGI LLP · ASTANA · EDUCATION

SUNScool
AI in the classroom — no internet

Your school's own artificial intelligence. The server stays in the school; teachers and students use the AI on their own computers. Children's questions never leave for the internet.

Kazakh · Russian · English | School network | Teacher in control | Data stays in school

Three roles — one installer

1
Server
A dedicated computer in the server room or the computer lab. The AI model (Gemma 4) runs here. Switched on before lessons start.

2
Teacher seat
The teacher's computer. No model — connects to the server. Helps prepare lessons, tasks and explanations.

3
Student seat
A student's computer. No model — connects to the server. Kids mode: the lesson only, no outside websites.

Student seat ⇄ **SUNScool server** in the school ⇄ **Teacher seat**

What the school gets

For students
Explains a topic in plain words in Kazakh or Russian and shows the way to the solution, not a ready answer.

For teachers
Lesson plans, tasks at different levels, check questions — faster. Decisions and grades stay with the teacher.

No cloud
One server per school. No need to buy a subscription for every student.

Under Kazakhstan law
Children's personal data stays in the school. AI texts are marked “made with AI”.

How it installs

1. **SUNScool USB stick** → INSTALL.cmd on the server computer → “1 — Server”. 15–30 minutes, no internet needed.
2. On the teacher's computer → “2 — Teacher seat” → the server address on the school network.
3. On students' computers → “3 — Student seat” → the same server address.
4. Desktop shortcuts: “SUNScool Server”, “SUNScool Teacher”, “SUNScool Student”.

Requirements

Server — recommended	Windows 11 64-bit, 64 GB RAM, NVIDIA RTX 4090 / 3090 24 GB, 1 TB NVMe · Gemma 4 26B-A4B · 4 answers at once
Server — maximum	Windows 11 64-bit, 128 GB RAM, NVIDIA RTX 5090 32 GB, 2 TB NVMe · Gemma 4 26B-A4B · 8 answers at once
Teacher / student	Windows 10/11 64-bit, 8 GB RAM, school network to the server
Languages	Kazakh, Russian, English

Other students wait in a short queue. The server profile is picked automatically from the GPU.

Safety

No internet
The AI runs on the school network. Tools (files, screen, internet) are off for students.

Separate networks
Student computers and the teacher's workplace are kept apart.

Teacher decides
The AI helps but never grades or makes decisions.

AI can be wrong
Check important things against the textbook and the teacher.

Pilot

One school, primary grades → feedback from teachers and parents → 10 schools with measurable results.
